

Data analyst with hands-on experience building and validating enterprise data pipelines, investigating data quality issues to root cause, and delivering Power BI reporting for both technical and non-technical stakeholders. Comfortable working across heterogeneous source systems and translating open-ended business questions into defined datasets and metrics. Recent postgraduate work in AI and data science, with applied experience building and evaluating AI-enabled automation.

SKILLS

Databases & Querying	SQL (complex joins, window functions, stored procedures, views), relational data modelling, Snowflake
Data Quality & Governance	validation logic, reconciliation across merged sources, tiered quality gates (bronze/silver/gold), root-cause investigation, data dictionary and transformation documentation
Reporting & Visualization	Power BI (DAX calculated measures, dashboard design), SSRS
Data Processing	PySpark, Databricks, Azure Data Factory, Python, Pandas
Databases & Cloud	Microsoft Azure, SQL (cloud-hosted), Snowflake, Elasticsearch
Environment & Tooling	Git, Linux/Unix, Jenkins, pytest, MS Office

PROFESSIONAL EXPERIENCE

AI Research Intern

Toronto Business College

Jan 2025 — Apr 2025

Toronto, ON

- Led an 8-person cross-functional team delivering MinuteMinders, a system that automated meeting transcription, summarization, and task extraction to replace manual minute-taking (Whisper, Pyannote, Mistral, spaCy, FastAPI, MySQL).
- Defined and ran the evaluation approach for the system, measuring transcription accuracy (WER 0.0746, CER 0.2932) and comparing generated summary readability against a Microsoft Copilot baseline (Flesch Reading Ease 50.53 vs 63.55) rather than relying on subjective quality checks.
- Built a Jenkins CI pipeline with SonarQube quality gates across a 15,400-line codebase.
- Ran a documented tool-selection process across each pipeline stage, recording the rationale and known limitations for each decision, and authored setup and usage documentation enabling the client organization to run the system independently.

Associate Consultant

Teklink Software Pvt Ltd

Jul 2022 — Aug 2023

Hyderabad, India

- Built and maintained Azure Data Factory and Databricks pipelines for large enterprise clients across coatings, consumer goods, and apparel; the largest engagement moved roughly 200GB across 100+ tables through 5–6 pipelines on a six-hour daily cycle.
- Applied business-defined data quality rules to classify pipeline records into bronze, silver, and gold tiers, catching completeness and consistency issues before data reached reporting layers.
- Investigated a pipeline load that had degraded from a 1–2 minute baseline to roughly an hour; traced the root cause to improperly handled nested JSON structures and worked with the team to restructure the parsing, restoring runtime to baseline.
- Translated open-ended client questions into Power BI reporting and DAX measures — including an analysis of which vehicle components beyond wheels were receiving coatings, giving the client visibility into where product volume was concentrated.
- Contributed to an on-premise-to-cloud migration consolidating a client’s HR data from multiple source systems into a single cloud data model.

Research Intern

Tech Mahindra

Jun 2021 — Jun 2022

Pune, India

- Worked on a national crime and policing intelligence platform for India’s Ministry of Home Affairs, unifying data on police organization, insurgency, and crime records into a single queryable model.
- Integrated 5 distinct source types — handwritten records, scanned PDFs, CSVs, legacy SQL records, and government Excel files — across six subject areas, applying integrity checks to maintain consistency across merges.
- Integrated five distinct source types — handwritten records, scanned PDFs, CSVs, legacy SQL records, and government Excel files — across 6 subject areas, applying integrity checks to maintain consistency across merges.
- Worked directly with ministry leadership and the project lead on visualization design and accessibility, shaping how reporting surfaced findings for non-technical decision-makers.

Additional Experience

Shift Supervisor, Building Services

Paragon Protection Limited

June 2025 — Present

Toronto, ON

- Coordinate shift operations and staffing for a residential property; own incident logging and written reporting to building management.

PROJECTS

AURA — Emotional-Intelligence RAG Chatbot (data pipeline & QC)

- Engineered a validated 50–70k-turn corpus, harmonizing four heterogeneous sources into a unified JSONL schema. Designed tiered data quality gates with a 300-example manually validated gold set and measured annotation reliability using Cohen’s kappa inter-annotator agreement. Built a reproducible evaluation harness with documented failure analysis and known limitations.

EDUCATION

Post graduate diploma in AI and Data Science, Loyalist College, Toronto, ON

Bachelor of Technology in Computer Science, Rashtriya Raksha University, Gujarat, India

Sep 2023 - Apr 2025

Aug 2018 - Jun 2022
